To Whom it May Concern:

We hired Platinum Pipeline for a 80+ acre, 330+ single family home development in Antioch in 2018. The project included 2,000+LF of offsite improvements, large detention/bioretention basins, and an outfall into an existing creek. Our team was saddled with a late start in August and a goal to be complete with underground installation in three months. That goal was met and all installed wet utilities passed testing and inspections without any issues.

Throughout the project Platinum beat our extremely aggressive schedule, even with several changes of direction caused by the normal nature of construction. They communicated thoroughly, and early enough, to facilitate proper coordination to keep everyone on the right path to completion. I would highly recommend Platinum for large projects, intricate projects, and everything in between.

Sincerely,

Mike Miller

Vice President of Land Development
Bay Area Division
