To whom it may concern:

Platinum Pipeline, Inc. has completed two projects for the City of Hayward within the last year. One was an emergency water main replacement at Mission Boulevard and Palisade Street at a cost of approximately \$250,000. The other one was replacement of a 16" water main transmitting water from the City 250 Reservoir to the 500 Reservoir. The final construction cost was about \$1M. Although both projects presented difficult construction issues, Platinum worked with the City in a professional manner to come up with solutions and completed the projects on time and within budget. It has been a pleasant experience working with the entire Platinum staff from field crew to the office personnel. Manuel de Freitas and Larry Fillmore were especially quick to respond to the City when questions and problems arise. Platinum Pipeline is a top tier contractor and I would highly recommend them for any utilities related construction project. The City of Hayward looks forward to work with Platinum Pipeline again in the future.

A handwritten signature in black ink that reads "Thomas Lam". The signature is fluid and cursive, with the first letters of "Thomas" and "Lam" being capitalized and prominent.
